In these selections readers are treated to a rare opportunity to see the world through the eyes of one of the twentieth century's most brilliant and sensitive scientists. Conceived by Chandrasekhar as a

supplement to his Selected Papers, this volume begins with eight papers he wrote with Valeria Ferrari on the non-radial oscillations of stars. It then explores some of the themes addressed in Truth and Beauty, with meditations on the aesthetics of science and the world it examines.

Highlights include: "The

picture of Chandra's universe, filled with stars and galaxies, but with space for poetics, paintings, and politics. The late S.

Chandrasekhar was best known for his discovery of the upper limit to the mass of a white dwarf star, for which he received the Nobel Prize in Physics in 1983. He was the author of many

books, including The Mathematical Theory of Black Holes and, most recently, Newton's Principia for the Common Reader.

Excerpt from Major Notes, Vol. 7: Winter, 1966 This doesn't really say that the student body is not religious. Many of the tense talk sessions which go on in

the dormitories late at night center around philosophy and religion. Most students have been told all their lives what to think. The process of maturing, of learning to question and find answers for themselves, leads them to some soul-searching. It may be agonizing, but when some conclusions have been reached they will

and they will be hard to

and Latin America.

With U.S. power, resources, and expertise, almost anything seemed possible in the countries of the Cold War's "Third World"—developing, postcolonial nations unaligned with the United States or Soviet Union. Yet by the end of the decade, this vision lay in ruins. What

Third World—and how this transformation was connected to shrinking aspirations back home in America. By the middle and late 1960s, democracy had given way to dictatorship in many Third World countries, while poverty and inequality remained pervasive. As America's costly war in Vietnam dragged on and
