Acids And Bases Section 3

Section 3 Acids, Bases, and Salts. Acids. Acid- a substance that produces hydrogen ions in a water solution. Forms H_3O^+ ions from the water and the excess H^+ ions. Taste sour. Corrosive. Bases. Base- Any substance that forms hydroxide ions, OH^- in a water solution.

SECTION 3 SOLUTIONS OF ACIDS AND BASES 1. the amount of acid or base dissolved in water 2. A strong acid has more molecules that break apart when you dissolve the acid in water than a weak acid does. 3. water and a salt 4. pH is the amount of hydronium ions in a solution. 5. Bases have high pH value, and acids have low pH. 6. acid rain

1. Mix a weak acid with a salt of its conjugate base. 2. Small amount of the acid will dissociate but some will remain undissociated. 3. The salt will fully dissociate to form the conjugate base of the acid in the solution. 4. The solution will contain a mixture of the weak acid and its conjugate base and can act as an acidic buffer.

In chemistry, acids and bases have been defined differently by three sets of theories: One is the Arrhenius definition defined above, which revolves around the idea that acids are substances that ionize (break off) in an aqueous solution to produce hydrogen (H^+) ions while bases produce hydroxide (OH^-) ions in solution.

Arrhenius Concept of Acids and Bases. The Swedish scientist Svante August Arrhenius defined acids as substances that increase the H^+ ion concentration of water when dissolved in it.; These protons go on to form hydronium ions (H_3O^+) by combining with water molecules.; Similarly, the Arrhenius definition of a base states that bases are the substances that, when dissolved in water, increase ...

SECTION 3 Name Class Date Solutions of Acids and Bases continued What Happens When Acids and Bases Mix? The base in an antacid reacts with the acid in your stomach. Why does your stomach feel better? Because the reaction between acids and bases makes the excess acid in your stomach neutral. This is a called a neutralization reaction.
