For example, one often-noted principle in engineering design is "keep it simple" or "KISS (keep it simple stupid)". This is something that engineers must remind themselves to do when they imagine very fancy complicated products that few people would really be able to use.

What are the (summarised) basic principles of engineering? 1. Nothing's perfect. There's only "good enough" and that's measured in decimal place accuracy, labor hours, and dollars. 2. Give yourself a nice, thick safety factor. Physics may be able to tell you what's generally happening with forces ...

Engineering is the use of scientific principles to design and build machines, structures, and other items, including bridges, tunnels, roads, vehicles, and buildings. The discipline of engineering encompasses a broad range of more specialized fields of engineering, each with a more specific emphasis on particular areas of applied mathematics, applied science, and types of application.

Hall Effect sensors operate on the principles suggested by Lorentzes' law. When we pass a current through a piece of semi-conductor and then apply a magnetic field to it at a right angle to the current, a voltage is produced by the separation of charged particles within the semi-conductor.
