In open-loop mode, the boost charge pump increases its input voltage by a factor of two and the inverting charge pump multiplies its input voltage by negative one. In burst mode, however, the factors are slightly smaller: $V_{\text{BOOST}} = 0.94 \times 2 \times V_{\text{IN_BOOST}}$, and $V_{\text{INV}} = -0.94 \times V_{\text{IN_INV}}$.

The ICL7660 integrates switches and the oscillator so that the switches S1, S3 and S2, S4 work alternately (Figure 1). The configuration shown here inverts the input voltage.
