This book analyzes the reasons for lackluster performance selected Latin American countries in mobilizing subnational own-source revenues and explores policy options to increase these revenues as efficiently and equitably as possible. Seven case studies--Argentina, Bolivia, Brazil, Colombia, Mexico, Peru, and Venezuela--span a wide range of characteristics, including federal and unitary countries, different geographical sizes, levels of economic development, and degrees of revenue decentralization. In this book, subnational governments include both intermediate and local levels of government, which are distinguished in the case studies. Together, the case studies provide a reasonably representative picture of the challenges faced throughout Latin America in mobilizing subnational own-source revenues in a manner that supports equitable growth.

Skills and Jobs in Brazil: An Agenda for Youth is a new report focusing on the challenge of economic engagement among the Brazilian youth. In the context of a fast aging population, Brazil's greatest economic opportunity is to increase its labor productivity, especially that of youth. This report documents important new facts about the extent of the youth economic disengagement, while at school and at work. Today, close to half of the Brazilian youth aged 15-29 years old is not fully economically engaged, because they are neither working nor studying, are studying in schools of poor quality, or are working in informal and precarious jobs. The report shows how the youth prospects in the labor market are dimmed by policies favoring existing workers over new entrants; in addition, it shows how youth are often ill equipped to meet an increasingly challenging labor market. The report suggests new education, skills, and jobs policy changes that Brazil could prioritize moving forward, so that it can take advantage of the last wave of its demographic transition. The report discusses in particular depth policies aiming to increase learning and reduce school dropouts in upper secondary education, and labor market policies that aim to support more effective and faster youth transitions from school to work.

2011 Reprint of 1958 Fourth Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. In 1948 Robert D. Edwards and John Magee published "Technical Analysis of Stock Trends" which is widely considered to be one of the seminal works of the discipline. It is exclusively concerned with trend analysis and chart patterns and remains in use to the present. As is obvious, early technical analysis was almost exclusively the analysis of charts, because the processing power of computers was not available for statistical analysis. "Technical analysis" is a financial term used to denote a security analysis discipline for forecasting the direction of prices through the study of past market data, primarily price and volume. Behavioral economics and quantitative analysis incorporate technical analysis, which being an aspect of active management stands in contradiction to much of modern portfolio theory.

The purpose of this guide is to enhance the chances of effective partnerships being developed between the public and the private-sector by addressing one of the main obstacles to effective PPP project delivery: having the right information on the right projects for the right partners at the right time.

For both beginners and experienced traders, this work describes the concepts of technical analysis and their applications. Murphy interprets the role of the technical forecasters and explains how they apply their techniques to the financial markets.

Information and communication technology (ICT) has always mattered in agriculture. Ever since people have grown crops, raised livestock, and caught fish, they have sought information from one another. Today, ICT represents a tremendous opportunity for rural populations to improve productivity, to enhance food and nutrition security, to access markets, and to find employment opportunities in a revitalized sector. ICT has unleashed incredible potential to improve agriculture, and it has found a foothold even in poor smallholder farms. ICT in Agriculture, Updated Edition is the revised version of the popular ICT in Agriculture e-Sourcebook, first launched in 2011 and designed to support practitioners, decision makers, and development partners who work at the intersection of ICT and agriculture. Our hope is that this updated Sourcebook will be a practical guide to understanding current trends, implementing appropriate interventions, and evaluating the impact of ICT interventions in agricultural programs.

The Fiscal Institutions of Tomorrow, the first publication in the series Institutions for People, addresses issues of public management that are key to economic development in Latin America and the Caribbean. It presents the challenges that the countries in the region face to strengthen fiscal institutions with a view to the future and with policy recommendations. This publication serves as

reference material for policymakers and economic analysts interested in studying the evolution of fiscal institutions in the region and identifying areas to improve governance.

This handbook is a comprehensive and authoritative reference for both senior policymakers—those responsible for the development of government bond markets in their own countries—and all individuals responsible for guiding the market development process at the operational level—those who have a substantial need to understand the policy issues involved.

Continued social and economic progress in Brazil will depend on high employment, sustained labor productivity and income growth, and opportunities for the poor and disadvantaged to upgrade their own productivity and convert it into sustainable incomes.

Over the past three decades, many countries of Latin America and the Caribbean have recognized health as a human right. Since the early 2000s, 46 million more people in the countries studied are covered by health programs with explicit guarantees of affordable care. Reforms have been accompanied by a rise in public spending for health, financed largely from general revenues that prioritized or explicitly target the population without capacity to pay. Political commitment has generally translated into larger budgets as well as passage of legislation that ring-fenced funding for health. Most countries have prioritized cost-effective primary care and adopted purchasing methods that incentivize efficiency and accountability for results, and that give stewards of the health sector greater leverage to steer providers to deliver on public health priorities. Evidence from the analysis of 54 household surveys corroborates that investments in extending coverage are yielding results. Though the poor still have worse health outcomes than the rich, disparities have narrowed considerably - particularly in the early stage of the life course. Countries have reached high levels of coverage and equity in utilization of maternal and child health services; coverage of noncommunicable disease interventions is not as high and service utilization is still skewed toward the better off. Catastrophic health expenditures have declined in most countries; the picture regarding equity, however, is mixed. While the rate of impoverishment owing to health-care expenditures is low and generally declining, 2-4 million people in the countries studied still fall below the poverty line after health spending. Efforts to systematically monitor quality of care in the region are still in their infancy. Nonetheless, a review of the literature reveals important shortcomings in quality of care, as well as substantial differences across subsystems. Improving quality of care and ensuring sustainability of investments in health remain an unfinished agenda.
