Fragile, raw, daring, brilliant...Sandra Bernhard rocks. The actress, philosopher, comedian, and cult goddess is definitely back -- and feeling fabulous -- with a labor of love that'll knock her followers off their feet and draw new ones to her like a magnet. Stage, film, music, television -- in every performance, Bernhard has shocked and amused, titillated and broken every rule. With her first two books, *Confessions of a Pretty Lady* and *Love, Love, and Love* Bernhard's electrifying talent took to the page and burned it up with flashes of true brilliance -- the kind of writing that separates the powerful from the good. And now, in this new book, Sandra returns with a deeply personal collection of spicy tales, fiercely witty riffs, and sweet doses of wisdom. Here is Sandy as we know and love her -- and as we've never quite seen her before: heartrenderingly honest, with the mouth of a diva, the soul of a fighter, and the insight of a girl who has lived life big. Like a whisper in your ear, Sandy opens up her world: from her friendship with her loyal housepainter to her imagined history as one of Jack Kennedy's lovers; from the sensual streets of Mogador to the comfort of her pristine L.A. bungalow; from her own poetry of romantic yearning and reflective prayer to dead-on truths brought to light in

the heartbreaking and hilarious glow of fashion, celebrity, rock and spirituality. There is nothing Sandra Bernhard offers that doesn't deliver a pungent snap of truth and the surprise of unexpected emotion in this, her most revealing and entertaining book yet.

This book is devoted to the welfare of invertebrates, which make up 99% of animal species on earth. Addressing animal welfare, we do not often think of invertebrates; in fact we seldom consider them to be deserving of welfare evaluation. And yet we should. Welfare is a broad concern for any animal that we house, control or utilize – and we utilize invertebrates a lot. The Authors start with an emphasis on the values of non-vertebrate animals and discuss the need for a book on the present topic. The following chapters focus on specific taxa, tackling questions that are most appropriate to each one. What is pain in crustaceans, and how might we prevent it? How do we ensure that octopuses are not bored? What do bees need to thrive, pollinate our plants and give us honey? Since invertebrates have distinct personalities and some social animals have group personalities, how do we consider this? And, as in the European Union 's application of welfare consideration to cephalopods, how do the practical regulatory issues play out? We have previously relegated invertebrates to the category ' things ' and did not worry about their treatment. New research suggest that some invertebrates such as cephalopods and crustaceans can have pain and suffering, might also have consciousness and awareness. Also, good welfare is going to mean different things to spiders, bees, corals, etc. This book is taking animal welfare in a very different direction. Academics and students of animal welfare science, those who keep invertebrates for scientific research or in service to the goals of humans, as well as philosophers will find this work thought-provoking,

instructive and informative.

Applied ethics has been gaining wide attention in a variety of curriculums, and there is growing awareness of the need for ethical training in general. Well-publicized ethical problems such as the Challenger disaster, the Ford Pinto case and the collapse of corporations such as Enron have highlighted the need to rethink the role of ethics in the workplace. The concept of applied ethics originated in medicine with a groundbreaking book published in 1979. Business ethics books began to appear in the 1980s, with engineering ethics following in the 1990s. This volume now opens up a new area of applied ethics, comprehensively addressing the ethical issues confronting the civil aviation industry. Aviation is unique in two major ways: firstly it has a long history of government regulations, and secondly its primary focus is

the safety of its passengers and crew. For decades commercial aviation was viewed in the same manner as public utilities, and thus it was highly regulated by the government. Since the Deregulation Act of 1978, aviation has been viewed as any other business while other experts continue to believe that the sudden switch to deregulation has caused problems, especially since many airlines were unprepared for the change. *Ethical Issues in Aviation* focuses on current concerns and trends, to reflect the changes that have occurred in this deregulated era. The book provides the reader with an overview of the major themes in civil aviation ethics. It begins with theoretical frameworks, followed by sections on the business side of aviation, employee responsibility, diversity in aviation, ground issues regarding airports, air traffic control and security, as well as health and the environment. The contributors to the volume include both academics doing research in the field as well as professionals who provide accounts of the ethical situations that arise in the workplace.

The origin of life is one of the biggest unsolved scientific questions. This book deals with the formation and first steps of the chemical evolution of nucleic acids, including the chemical roots behind the origin of their components from the simplest sources in a geochemical context. Chemical evolution encompasses the chemical processes and interactions conducive to self-assembly and supramolecular

organization, leading to an increase of complexity and the emergence of life. The book starts with a personal account of the pioneering work of Stanley Miller and Jeffrey Bada on the Chemistry of Origins of Life and how the development of organic chemistry beginning in the 19th century led to the emergence of the field of prebiotic chemistry, situated at the frontier between organic, geo- and biochemistry. It then continues reviewing in tutorial manner current central topics regarding the organization of nucleic acids: the origin of nucleobases and nucleosides, their phosphorylation and polymerization and ultimately, their self-assembly and supramolecular organization at the inception of life.
