conduits.

*DRAINAGE WATER  
MANAGEMENT -  
USDA*

Irrigation systems in arid regions should be designed to supply water and also to remove water—implying that irrigation should be combined with drainage.

Drainage And

Irrigation Water Management

This may seem paradoxical, but salts need to be removed by application of additional water to dissolve the salts, leach them out of the soil, and subsequently remove the leachate through drains or ditches, where the drain water may still create concerns for downstream areas due to its high salt content.
