A #1 New York Times Bestselling Author A Novel of Midnight, Texas (Book 3) From the bestselling author of the Sookie Stackhouse novels -- "the Mark Twain of things that live under your bed" (Houston Press) -- comes a new novel of Midnight, Texas, the town where some secrets will never see the light of day.

What made the Sopranos finale one of the most-talked-about events in television history? Why is sudoku so addictive and the iPhone so darn irresistible? What do Jackson Pollock and Lance Armstrong have in common with theoretical physicists and Buddhist monks? Elegance. In this thought-provoking exploration of why certain events, products, and people

capture our attention and imaginations, Matthew E. May examines the elusive element behind so many innovative breakthroughs in fields ranging from physics and marketing to design and popular culture. Combining unusual simplicity and surprising power, elegance is characterized by four key elements—seduction, subtraction, symmetry, and sustainability. In a compelling, story-driven narrative that sheds light on the need for elegance in design, engineering, art, urban planning, sports, and work, May offers surprising evidence that what's "not there" often trumps what is. In the bestselling tradition of *The Tipping Point*, *Made to Stick*, and *The Black Swan*, *In Pursuit of Elegance* will change the way you think about the world.

When he died in 1971, the great Burmese meditation master Sayagyi U Ba Khin left an invaluable legacy. He was one of the first teachers of the twentieth century to present the ancient technique of Vipassana in a modern, systematic way, making it accessible to people of diverse denominations and cultures. Vipassana, the essence of the teaching of the Buddha, is a simple and practical method for achieving real peace of mind. This journal commemorates U Ba Khin's exemplary life and teaching. It contains a selection of his discourses, and biographical sketches of his life and the lives of the teachers who preceded him. Included are essays about his noteworthy career by his renowned disciple, S.N. Goenka, as well as articles on different aspects of the Vipassana technique. This journal, originally published in 1991, marked the first time much of this material appeared in one collection in English. In the years since his death, the technique that U Ba Khin taught has spread from Burma back to India, its land of origin, and from there, around the world. Today Vipassana meditation can be learned at established centres in different countries, offering to ever-increasing numbers of people the opportunity to learn this art of living which brings peace and harmony within. The Vipassana Research Institute offers this collection as a tribute to Sayagyi U Ba Khin in the hope that many more people will benefit from the wonderful way of life that he lived and of which he was a brilliant example.

In this book, philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism: that if we could reduce or eliminate pollution we could 'save' the planet without unduly disrupting our modern, industrialized societies. Lee argues instead that the process of modernization, with its attendant emphasis on technological innovation, has fundamentally transformed 'nature' into just another manmade 'artefact.' Ultimately, what needs to be determined is if nature has value above and beyond human considerations, whether aesthetic, spiritual, or biological. This provocative book attempts to reconfigure environmental ethics, positing the existence of two separate ontological categories—the 'natural' and the 'artefactual.' Natural entities, be they organisms or inert matter, are 'morally considerable' because they possess the ontological value of independence, whereas artefacts are created by humans expressly to serve their own interests and ends.

"West and Idema's *Monks, Bandits, Lovers, and Immortals* represents a milestone in the reception of early Chinese drama in the West. Not only do the translations of eleven plays take precision, readability, and range to new heights, but the substantial yet accessible Introduction, together with a number of useful appendices, illustrations, and tables, make it the anthology of choice for courses in Chinese literature, world literature, and theater." --Patricia Sieber, Ohio State University --- "This magnificent collection of eleven early [1250-1450] Chinese plays will give readers a vivid sense of life and a clear understanding of dramatic literature during an extraordinarily eventful period in Chinese history. Not only are the eleven plays in this volume expertly translated into lively, idiomatic English; they are each provided with illuminating, scholarly introductions that are yet fully intelligible to the educated lay reader. A marvelous volume." --Victor Mair, University of Pennsylvania

Taking an ecological approach to our evolution, Clive Finlayson considers the origins of modern humans within the context of a drying climate and changing landscapes. Finlayson argues that environmental change, particularly availability of water, played a critical role in shaping the direction of human evolution, contributing to our spread and success. He argues that our ancestors carved a niche for themselves by leaving the forest and forcing their way into a long-established community of carnivores in a tropical savannah as climate changes opened up the landscape. They took their chance at high noon, when most other predators were asleep. Adapting to this new lifestyle by shedding their hair and developing an active sweating system to keep cool, being close to fresh water was vital. As the climate dried, our ancestors, already bipedal, became taller and slimmer, more adept at travelling farther in search of water. The challenges of seeking water in a drying landscape moulded the minds and bodies of early humans, and directed their migrations and eventual settlements. In this fresh and provocative view of a seven-million-year evolutionary journey, Finlayson demonstrates the radical implications for the interpretation of fossils and technologies and shows that understanding humans within an ecological context provides insights into the emergence and spread of *Homo sapiens sapiens* worldwide.

The Rabbit 3000 is a popular high-performance microprocessor specifically designed for embedded control, communications, and Ethernet connectivity. This new technical reference book will help designers get the most out of the Rabbit's powerful feature set. The first book on the market to focus exclusively on the Rabbit 3000, it provides detailed coverage of: Rabbit architecture and development environment, interfacing to the external world, networking, Rabbit assembly language, multitasking, debugging, Dynamic C and much more! Authors Kamal Hyder and Bob Perrin are embedded engineers with years of experience and they offer a wealth of design details and "insider" tips and techniques. Extensive embedded design examples are supported by fully tested source code. Whether you're already working with the Rabbit or considering it for a future design, this is one reference you can't be without! * Let the experts teach you how to design embedded systems that efficiently hook up to the Internet using networked core modules * Provides a number of projects and source code using RabbitCore, which will make it easy for the system designer and programmer to get hands-on experience developing networked devices * Accompanying CD-ROM contains useful tools and software for embedded network design
