[75-McCartney-Sustainable development and ecosystem services](#)

Operating our farms as ecosystems – The soil ecosystem's functioning is determined by the presence, diversity, and photosynthetic rate of actively growing green plants. The soil's ability to support nutrient-dense, high vitality crops, pastures, fruit, and vegetables requires a diverse array and biomass of soil microbes from a range of functional groups.

[Sustainable agroecosystems: Agriculture and the](#)

Agroecology (a-grō-ē- 'kă-lă-jé) is an applied science that studies ecological processes applied to agricultural production systems. Bringing ecological principles to bear can suggest new management approaches in agroecosystems. The term is often used imprecisely, as the term can be used as a science, a movement, or an agricultural practice.
