South Africa has made huge gains in ensuring universal enrolment for children at school, and in restructuring and recapitalising the FET college sector. However, some three million young people are not in education, employment or training and the country faces serious challenges in providing its youth with the pathways and support they need to transition successfully into a differentiated system of post-school education and training. Across nine evidence-based chapters, 17 authors offer a succinct overview of the different facets of post-school provision in South Africa. These include an analysis of the impact of the national qualifications system on occupational training, the impact of youth unemployment, the capacity of the post-school system to absorb larger numbers

Read Online Engineering Science Memorandum For Fet N1 August 2004

of young people, the relationship between universities and FET colleges, the need for more strategic public and private investment in skills development, and a youth perspective on education and training policy. The authors have a number of recommendations for improving the alignment between schooling, further education and training, and university education - interventions that could shape the future of our youth.

Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

The "cold war university" is the academic component of the military-industrial-academic complex, and its archetype, according to Rebecca Lowen, is Stanford University. Her book challenges the conventional wisdom that the post-World War II "multiversity" was created by military patrons on the one hand and academic scientists on the other and points instead to the crucial role played by university administrators in making their universities dependent upon military, foundation, and industrial patronage. Contesting the view that the "federal grant university" originated with the outpouring of

Read Online Engineering Science Memorandum For Fet N1 August 2004

federal support for science after the war, Lowen shows how the Depression had put financial pressure on universities and pushed administrators to seek new modes of funding. She also details the ways that Stanford administrators transformed their institution to attract patronage. With the end of the cold war and the tightening of federal budgets, universities again face pressures not unlike those of the 1930s. Lowen's analysis of how the university became dependent on the State is essential reading for anyone concerned about the future of higher education in the post-cold war era.

Directory of leading scientists and engineers who are the leaders in the most important areas of American technology. Each entry gives education, publications, achievements, area of expertise, honors, patents, and personal information.
