# Download Ebook Extract Worksheets From Excel Workbook

To get the name of the current worksheet (i.e. current tab) you can use a formula based on the CELL function. CELL retrieves the workbook name and sheet, and the MID and FIND functions are used to extract just the sheet name. In the example shown, the formula in E5 is: =MID(CELL("filename", A1),FIND("]",CELL("filename", A1)) + 1,255)

~~Excel formula: Get sheet name only | Exceljet~~

So, the formula, MATCH (\$B\$3,Sheet1!\$A\$1:\$E\$1,0), will return value 3. So, our new formula is: =INDEX (Sheet1!\$A2:\$E2, 3) The interpretation of this part is very simple. Think \$A\$2:\$E\$2 as an array and its 3rd value is 75 (as there is no column to do the intersection) as you're seeing in the image below.

~~Using Excel to get data from another sheet based on cell value~~

Here in the Move Or Copy dialog option, select the target sheet and Excel will only display the open worksheets in the list Else, if you want to copy the worksheet instead of moving, then kindly make a copy of the Excel workbook before Lastly, select the OK button to copy or move the targeted Excel spreadsheet.
