This text introduces nursing students to the cognitive skills, or thought processes, required of professional nurses. Using a practical approach and a nursing process framework throughout, the book provides a bridge between the theory and the application of these skills. Cognitive skills are presented in a competency-based, clinically oriented format, with emphasis on teaching critical thinking. Chapters end with a workbook section, to provide students with real-world applications of what they have learned. Case studies and checklists throughout aid the student in applying content. The book is written at an accessible reading level.
