Colombian if it consists of 2013 red points and 2014 blue points, and no three of the points of the configuration are collinear. By drawing some lines, the plane is divided into several regions.

~~IMO 2013 Solution Notes – Evan Chen~~

In the plane, 2013 red points and 2014 blue points are marked so that no three of the marked points are collinear. One needs to draw lines not passing through the marked points and dividing the plane into several regions. The goal is to do it in such a way that no region contains points of both colors.

by Ivan Guo, Australia; Problem 3 (G6) proposed by Alexander A. Polyansky, Russia; Problem 4 (G1) proposed by Warut Suksompong and Potcharapol Suteparuk, Thailand; Problem 5 (A3) proposed by Nikolai Nikolov, Bulgaria

~~Art of Problem Solving~~

Given 2013 red and 2014 blue points in the plane, assume that no three of the given points lie on a line. A partition of the plane is called perfect if no region contains points of different colors. Determine the smallest number k for which a perfect partition can always be achieved by drawing k straight lines.

~~Short-listed Problems and Solutions~~

The IMO performs once a year, and has become an important activity in the field of mathematics. Because the problems in IMO are very difficult, and in general needs two days to finish the test of only six problems, therefore, it is significant to study how to solve and solve those IMO problems with various methods. With respect to question (a) of the problem of discussing, at first, using the ...
