You have a great idea, now what? That first mile—where an innovation moves from an idea on paper to the market—is often plagued by failure. In fact, less than one percent of ideas launched by big companies end up having real impact. The ideas aren't the problem. It's the process. The First Mile focuses on the critical moment when an innovator moves from planning to reality. It is a perilous place where hidden traps snare entrepreneurs and roadblocks slow innovators inside large companies. In this practical and enlightening manual, strategic adviser Scott Anthony equips innovators with new tools, questions, and examples to speed through this crucial early stage of innovation. You'll learn:

- How to evaluate your idea's strengths

and weaknesses using the “ DEFT ” process—Document, Evaluate, Focus, and Test • Fourteen recipes from an “ experiment cookbook ” to gain confidence in your idea or business • Why “ spinouts, ” “ wrong turns, ” and other challenges commonly trip up innovation—and the practical strategies you can use to avoid them • Why innovators need to seek chaos in an age of constant change—and other essential leadership skills Drawing on his decade of experience as an innovation adviser and investor, Anthony describes hard-won lessons from disruptive start-ups and global giants alike. The First Mile will give you the knowledge and confidence to travel this perilous—but ultimately promising—terrain. The first mile can be a scary place, but you don ’ t have

While building big horsepower has become easier, putting that power down to the pavement is still quite a challenge. Getting great "bite" involves a lot more than sticky tires and a smoky burnout. The suspension system is being put to work in a way it was never designed to operate. A better understanding of exactly what is happening to the suspension when the car launches from a standing start will assist you in maximizing your car's effectiveness on the street or at the track. In *How to Hook and Launch: Traction Mods for the Street & Strip*, author Dick Miller explains the physics behind what gets a car moving from a standing

start, and how to best harness the various powers at work. Getting the rear tires to really bite and gain maximum traction is divided into several small steps, and Miller walks you through each phase of the launch. Today's enthusiasts face a wide range of potential traction improvements, from softer tires and basic bolt-ons to complete or partial chassis replacements. Most opt for something in-between, where some well-engineered components are chosen to replace the factory equipment and offer a greater capability and range of adjustment. It is this range of upgrades where Miller spends most of his time, explaining what the parts and pieces do, and how to use them to their highest potential.

convinced that there will be a paradigm shift in the automotive industry. Issues such as increasing efficiency and advancing electrification of the powertrain, automatic and semi-automatic driving, as well as integration in information networks will define the automotive future. In addition, the variety of solutions available worldwide will become increasingly more complex and mobility patterns will also change rapidly. However, this does not mean that cars will drive virtually in the future. Powertrains based on internal combustion engines will still dominate for a very long time and demonstrate new strengths in combination with hybrid drives. Transmissions will also gain in importance as the link between the internal

The only way to teach science is to do science. The combination of teaching and doing involves three elements: knowing content, teachers knowing and understanding themselves as teachers and learners, and, most importantly, knowing children. They brilliantly identify key ingredients for primary

It will help you discover new ways to think about science and develop lessons that are rich, fun, and authentic for both you and your students. All educators will find examples, questions, stories, and thought-provoking ideas to give students a strong start in science achievement, plus:
