Typically, graduate programs involve core courses taken in the Department of Mechanical Engineering and courses in other related fields, such as materials science, mathematics, chemical engineering, civil engineering, environmental engineering, electrical engineering, computer science, sustainability, physics, biology and chemistry.

Graduate Program | The City College of New York

The graduate program in MAE is organized into three broad areas, as detailed below, although considerable opportunity exists for students to work on projects that overlap more than one group. In fact, interdisciplinary research is strongly encouraged within MAE and many faculty members and graduate students work across traditional disciplines.

Graduate – Department of Mechanical & Aerospace Engineering

Mechanical Engineering is perhaps the broadest and most diverse of the engineering disciplines, playing a central role in many areas from the automotive and aerospace industries to biotechnology, computers, electronics, microelectromechanical systems, energy conversion, environmental control, automation and manufacturing. The Mechanical Engineering Faculty carry out advanced research in ...

Mechanical Engineering was the first school of engineering to be established at Purdue University in 1882. From just 120 students, the School has grown over the last 130 years to serve over 1,800 undergraduate and graduate students annually. Originally located in Mechanics Hall, a one-story red brick building, Mechanical Engineering now has extensive facilities that include two major satellite research laboratories, Ray W. Herrick Laboratories and Maurice J. Zucrow Laboratories, named in honor of the first director. There are more than 30 additional instructional and research laboratories, including the Roger B. Gatewood wing, which opened in 2011, and increased the space available to students and faculty by 44,000 square feet. Through stories and profiles, as well as hundreds of images (in black and white and color), Full Steam Ahead tells the story of the School of Mechanical Engineering and looks to a future where Purdue engineers are leading the world and making advances in biotechnology, nanotechnology, robotics, design and manufacturing, and renewable energy. Distinguished alumni included in this publication range from astronauts, like Gus Grissom and Jerry Ross, to Bob Peterson, lead writer and co-director for the Oscar-winning animated film, Up.

In 1999 the National Academies of Sciences, Engineering, and Medicine released a landmark report, *Our Common Journey: A Transition toward Sustainability*, which attempted to "reinvigorate the essential strategic connections between scientific research, technological development, and societies' efforts to achieve environmentally sustainable improvements in human well-being."¹ The report emphasized the need for place-based and systems approaches to sustainability, proposed a research strategy for using scientific and technical knowledge to better inform the field, and highlighted a number of priorities for actions that could contribute to a sustainable future. The past 15 years have brought significant advances in observational and predictive capabilities for a range of natural and social systems, as well as development of other tools and approaches useful for sustainability planning. In addition, other frameworks for environmental decision making, such as those that focus on climate adaptation or resilience, have become increasingly prominent. A careful consideration of how these other approaches might intersect with sustainability is warranted, particularly in that they may affect similar resources or rely on similar underlying scientific data and models. " To further the discussion on these outstanding issues, the National Academies of Sciences, Engineering, and Medicine convened a workshop on January 14-15, 2016. Participants discussed progress in sustainability science during the last 15 years, potential opportunities for advancing the research and use of scientific knowledge to support a transition toward sustainability, and challenges specifically related to establishing indicators and observations to support sustainability research and practice. This report summarizes the presentations and discussions from the workshop.

This book comprises select proceedings of the International Conference on Recent Innovations and Developments in Mechanical Engineering (IC-RIDME 2018). The book contains peer reviewed articles covering thematic areas such as fluid mechanics, renewable energy, materials and manufacturing, thermal engineering, vibration and acoustics, experimental aerodynamics, turbo machinery, and robotics and mechatronics. Algorithms and methodologies of real-time problems are described in this book. The contents of this book will be useful for both academics and industry professionals.

Looks at one hundred fifty colleges and universities across the country--half public and half private--that provide superb academic studies, top-notch facilities, and other excellent features for a lot less money than the other schools.
