Munkres §34 Ex. 34.1. We are looking for a non-regular Hausdorff space. By Example 1 p. 197, RK [p. 82] is such a space. Indeed, RK is Hausdorff for the topology is finer than the standard topology [Lemma 13.4]. RK is 2nd countable for the sets (a, b) and (a, b) − K, where the intervals have rational end-points, constitute a countable basis.

Ordered Normal (in the order topology) The product of two ordered (even well-ordered) spaces need NOT be normal: is not normal. Well-ordered: (a,b]=(a,b+1) are open and form a basis, cover each closed set with such intervals that do not intersect the other set. General case (ordered): covered, for example, in Steen, Seebach, Counterexample 39, 1-6.
