This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party

Download File PDF Oncology Coding And Billing Manual

convened by the

International Agency for
Research on Cancer / WHO.

ICD-O is a dual
classification with coding
systems for both topography
and morphology. The book has
five main sections. The

Download File PDF Oncology Coding And Billing Manual

first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list

of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable

Revisions of the non-Hodgkin
lymphoma and leukaemia
sections, based on the WHO
Classification of
Hematopoietic and Lymphoid
Diseases. The five-digit
morphology codes allow
identification of a tumour

or cell type by histology,
behaviour, and grade.

Revisions in the morphology
section were made in
consultation with a large
number of experts and were
finalised after field-
testing in cancer registries

third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now

that changed behaviour code.
