RF Basic Concepts, Caspers, McIntosh, Kroyer The S-matrix for an ideal, lossless transmission line of length l is given by $S_{11} = \Gamma e^{-j\beta l}$ where Γ is the propagation coefficient with the wavelength λ (this refers to the wavelength on the line containing some dielectric). For $\Gamma = 1$ we denote $\Gamma = 0$. N.B.: It is supposed that the reflection factors are

The audience for the RF basic course are electrical engineers, technicians, sales engineers and other employees of an RF-related company who want to have general idea of RF basic concepts.

RF Fundamentals, Components and Basic Concepts of RF Design

Radio-frequency engineering is a subset of electronic engineering involving the application of transmission line, waveguide, antenna and electromagnetic field principles to the design and application of devices that produce or utilize signals within the radio band, the frequency range of about 20 kHz up to 300 GHz. It is incorporated into almost everything that transmits or receives a radio wave, which includes, but is not limited to, mobile phones, radios, Wi-Fi, and two-way radios. RF engineer

RF engineering basic concepts: Sparameters. F. Caspers. CERN, Geneva, Switzerland. Abstract. The concept of describing RF circuits in terms of waves is discussed and the S-matrix and related matrices are defined. The signal flow graph (SFG) is introduced as a graphical means to visualize how waves propagate in an RF network. The properties of the most relevant passive RF devices (hybrids, couplers, nonreciprocal elements, etc.) are delineated and the corresponding S-parameters are given.
