combination of these.

sedimentary rocks.. rocks? | Yahoo Answers

Types of Sedimentary Rock. There are three major types of sedimentary rocks; chemical, clastic and organic sedimentary rocks. 1. Chemical. Chemical sedimentary rocks occur when components of water evaporate and previously dissolved minerals are left behind. These types of sedimentary rocks usually occur in arid areas; like gypsum and salt deposits.

Sedimentary Rock: Types And How They Are Formed? (2020 ...

Firstly, a breccia is itself a kind of sedimentary rock. It consists mainly of large (pea sized and up), angular sediment grains. For an existing sedimentary rock to become a breccia, it must be...

How does sediment become sedimentary rock? - Answers

Sedimentary Rocks Formed when particles of broken rock and organic materials are pressed and cemented together to form new rocks. Sediments are mud, sand, pebbles, shells, bones, leaves, and stems. Some rocks of this type can be sandstone, limestone, and gypsum.

Sedimentary Rocks Are Formed: study guides and answers on ...

Rocks are the foundation of planet Earth, and there are three major rock types:

metamorphic, sedimentary and igneous. Metamorphic rock is that which is changed from one type to another over time,...

Describe how igneous rock is formed into sedimentary rock ...

Sedimentary rocks are only a thin veneer over a crust consisting mainly of igneous and metamorphic rocks. Sedimentary rocks are deposited in layers as strata, forming a structure called bedding. Sedimentary rocks are often deposited in large structures called sedimentary basins. Sedimentary rocks have also been found on Mars.

Sedimentary rock - Wikipedia

Sedimentary rocks are formed on or near the Earth's surface, in contrast to metamorphic and igneous rocks, which are formed deep within the Earth. The most important geological processes that lead to the creation of sedimentary rocks are erosion , weathering , dissolution , precipitation , and lithification.

Sedimentary Rocks | National Geographic Society

The main contributors to sedimentary rock formation are erosion, precipitation, or natural weathering; as well as lithification and dissolution. Some of the more common types of sedimentary rock include sandstone, shale, limestone and coal. There are two types of sedimentary rocks, referred to as either detritus or chemical.

How Are Sedimentary Rocks Formed? - WorldAtlas

Most of the rocks exposed at the surface of Earth are sedimentary--formed from particles of older rocks that have been broken apart by water or wind. These sedimentary particles may bury living and dead animals and plants on the lake or sea bottom. The sediments at the bottom of the pile become rock.
