Pituitary tumors - Symptoms and causes - Mayo Clinic

The pituitary gland is tucked in a small area just below your brain. It's very close to the optic nerves, which carry messages between the brain and eyes. There's not much room for anything else in...

Pituitary Gland Tumors: Symptoms, Causes, Diagnosis, Treatment

The pituitary gland sends signals to other glands, for example the thyroid gland, to make hormones, such as thyroid hormone. The hormones made by the pituitary gland and other glands have a big...

Hypopituitary: Pituitary Gland Disorder Causes & Treatments

Overproduction or underproduction of a pituitary hormone will affect the respective end-organ. For example, insufficient production (hyposecretion) of thyroid stimulating hormone (TSH) in the pituitary gland will cause hypothyroidism, while overproduction (hypersecretion) of TSH will cause hyperthyroidism. Thyroidisms caused by the pituitary gland are less common though, accounting for less ...

Pituitary disease - Wikipedia

The pituitary gland is a tiny organ, the size of a pea, found at the base of the brain. As the "master gland" of the body, it produces many hormones that travel throughout the body, directing certain processes or stimulating other glands to produce other hormones. The pituitary gland makes or stores many different hormones.

Pituitary Gland | Hormone Health Network

The pituitary gland is often dubbed the "master gland" because its hormones control other parts of the endocrine system, namely the thyroid gland, adrenal glands, ovaries, and testes. However, the pituitary doesn't entirely run the show. In some cases, the hypothalamus signals the pituitary gland to stimulate or inhibit hormone production.

An Overview of the Pituitary Gland - The Endocrine System ...

The pituitary gland is a small gland that sits in the sella turcica ('Turkish saddle'), a bony hollow in the base of the skull, underneath the brain and behind the bridge of the nose. The pituitary gland has two main parts, the anterior pituitary gland and the posterior pituitary gland.

Pituitary gland | You and Your Hormones from the Society ...

The pituitary is a small gland found inside the skull just below the brain and above the nasal passages, which are above the fleshy back part of the roof of the mouth (known as the soft palate). The pituitary sits in a tiny bony space called the sella turcica.

What Are Pituitary Tumors? - American Cancer Society

The pituitary gland, also called the "master" gland, is a pea-size gland important to the functioning of the human body. It is located behind the eyes and below the front of the brain. The...

Pituitary Cancer: Symptoms, Diagnosis, and Treatments

The pituitary is an endocrine (hormone-producing) gland that sits just beneath the base of the brain, behind the bridge of the nose. It is very small – only about the size of a pea.
