With this fourth edition, accountants will acquire a practical set of tools and the confidence they need to use them effectively in making business decisions. It better reflects a more conceptual and decision-making approach to the material. The authors follow a "macro- to micro-" strategy by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle. The objective is to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. This motivates accountants by grounding the discussion in the real world, showing them the relevance of the topics covered to their careers.

When it comes to operating a small business, it doesn't matter how good the idea is if the accounting behind the operations isn't solid.
